

# Characteristics of Your New Cabinetry

You have selected one of our quality cabinetry choices. Our cabinetry is built to the highest standard in cabinet and furniture manufacturing. To better understand your choice, we have provided the following information:

## WOOD CABINETRY:

The wood cabinetry in your space is new to you and has been newly processed. However, since wood was created by nature, it had a life prior to your project. During its journey, your wood was exposed to the elements and inherited characteristics such as pinholes, knots and mineral streaks. No two trees are alike, so variations in grain, texture and colour are inherent in all wood products. Wood parts will have similarities, but they will never look exactly the same from piece to piece. The beauty and distinctive appearance of these characteristics are proof of the unique and natural beauty of wood.

As a natural product, the wood in your cabinetry will adjust to life in your home. Wood will continue to expand and contract as seasons change, as the humidity in your home fluctuates, and as you go about common household activities such as cooking. Hairline cracks in the finish at the joints of your doors are common and will not compromise the strength of the joints. These cracks will be more noticeable on solid Paint and Paint/Glaze finishes and are not considered a defect and are therefore not eligible for warranty. We recommend that you maintain a humidity level of 40–50% in your home.

Though our finishes are produced to enhance and protect your cabinetry, they will react to prolonged exposure from cooking, tobacco smoke and humidity. This exposure may cause your cabinetry to change in colour over time. This is a common trait of wood cabinetry and furniture. Again, we recommend maintaining humidity levels of 40 to 50% to alleviate warping, shrinkage and cracking in your wood cabinets.

### PAINTED LACQUER CABINETRY:

Our painted lacquer door styles are made of a durable  $\frac{3}{4}$ " Medium Density Fiberboard (MDF). These doors are made in our manufacturing facility using the Biesse Nesting Router, then sanded by hand. Our Painted Lacquer Doors are painted using a high quality, multi-step, durable product that was developed for the furniture industry.

Please avoid using cleaners containing ammonia, silicone or bleach additives. Never use abrasive cleaners, scouring pads or powdered cleaners on any type of cabinetry. For stubborn stains, you may use a small amount of a mild dish detergent with warm water. Always dry surface immediately after cleaning.

### FUSION CABINETRY:

Superior Cabinets is proud to offer a revolutionary addition to our product portfolio. The Fusion line is a great example of why Superior is leading the industry in innovation, style and design. Fusion is a collection of beautifully hand crafted finishes offered on an eco-friendly MDF. Each kitchen is hand finished by one of our Artisan finishers.

Our MDF is created from recycled wood materials, with low emissions and minimal waste. This product is resistant to warping or cracking with humidity or seasonal changes. The doors are constructed as one piece, giving them additional strength, but have the appeal of a five piece door. As with all furniture finishes, careful care and cleaning will prolong the beauty of your cabinetry.
